+919692413929 deepakkumartripathy1008@gmail.com Berhampur Ganjam Odsiha

PROFESSIONAL SUMMARY

Software Developer specializing in Generative AI and LLM-based application development, with hands-on experience building intelligent, full-stack systems powered by modern AI models. Skilled in designing chatbot workflows, integrating AI-driven features, and developing context-aware applications that solve real-world problems. Strong foundation in React, backend systems, and machine learning, with experience in computer vision and scalable application design. Proven ability to translate complex ideas into functional AI products through projects, hackathons, and independent development, with a focus on accuracy, usability, and performance.

EDUCATION

NIST University | 2023-2027 **B.Tech. in Computer Science and Technology**

- Current CGPA: 8.835

Khalikoat higher secondary school | 2021-2023 **Intermediate (12th std)**

- Secured 77%

Saraswati Sishu Vidya Mandir, Gsoainnuagaon | 2021 **Matriculation (10th std)**

- Secured 88.67%

EXPERIENCE

Student Trainee | May 2026 - Jun 2026 **MindBrain Innovation PVT LTD BBSR Odisha**

- Developed a Smart Exam Paper Generation system using AI/ML concepts to automate question paper creation, while gaining hands-on experience in backend development, problem-solving, and real-world software engineering.

Student Trainee | Jun 2024 - Jul 2024 **CTTC BBSR Odisha**

- Gained practical exposure to Machine Learning, Deep Learning, and Computer Vision.
- Built a Face Detection Model to identify human faces in images using computer vision techniques.
- Applied AI concepts to a real-world image detection task.

Student Trainee | May 2024 - Jun 2024 **Code Tantra at NIST University**

- Built a strong foundation in C programming and core programming concepts.
- Solved coding exercises to improve problem-solving and logical thinking.
- Gained hands-on experience with basic programming constructs like loops, functions, and arrays.

SKILLS

Programming Languages: JavaScript, Java, Python

Web Technologies: React.js, HTML5, CSS3, Tailwind CSS, Node.js

Databases & Backend: MongoDB, Firebase

AI & ML: OpenCV, TensorFlow, Keras, Computer Vision

Tools & Platforms: GitHub, Microsoft Azure, Excel, Framer Motion

PROJECTS

The Ghoomakkads - Let's Explore India

🔗 <https://github.com/cooldkt143/The-Ghoomakkads.git>

🔗 <https://the-ghoomakkads.vercel.app/>

- Created an AI-driven travel planning platform with personalized recommendations
- Integrated features like Ghoom-Bot, Surprise Trip Planner, and Safety Analyzer
- Improved travel decision accuracy using preference-based recommendation logic

Smart Student Handler -Your all-in-one AI academic assistant for attendance, study materials, and exam preparation.

🔗 <https://github.com/cooldkt143/Smart-Student-Handler.git>

- Designed an academic management system covering attendance, study material, and exam prep
- Integrated AI-based exam assistance and performance analytics
- Streamlined academic planning for students through centralized dashboards

Legal AI - Empower the Justice through Intelligence Automation

🔗 <https://github.com/cooldkt143/legalAi.git>

🔗 <https://legal-ai-8w7f.vercel.app/>

- Created an AI-based legal assistant to simplify complaint filing and legal awareness
- Structured separate workflows for citizens and police, improving data clarity
- Enabled IPC and CrPC section mapping with digital case record management

CREDEX.IO - Measure What you can build

🔗 <https://github.com/cooldkt143/CREDEX.io.git>

🔗 <https://credex-io.vercel.app/>

- Built a platform aggregating developer activity from GitHub, LinkedIn, and coding platforms
- Designed scoring logic to assess skill consistency, activity level, and credibility
- Developed a step-based React interface for recruiters and developers

Face Detection

🔗 <https://github.com/cooldkt143/face-Detection.git>

- Implemented a real-time face detection and recognition system using OpenCV
- Trained CNN models with TensorFlow and Keras for improved recognition accuracy
- Covered the complete pipeline from data collection to live webcam inference

Age and Gender Detection

🔗 <https://github.com/cooldkt143/AgeAndGender-Recognition.git>

- Developed a computer vision system for real-time and image-based age and gender classification
- Trained and optimized ML models using Python and OpenCV
- Enhanced prediction accuracy through preprocessing and hyperparameter tuning

KEY ACHIEVEMENTS

Runners up - IEEE Hack-Arena 2024 in GNIT, Hyderabad

Finalist - IEEE Innovate 2025

Finalist - HyperSpace Innovation Hackathon in IPEC, Ghaziabad 2026

Finalist - CodeKirti 4.0 Devxtream in P MEC, Berhampur in 2026

Finalist - Techspire 1.0 in Nalanda Institute of Technology, BBSR in 2026

Top Performer - DataSprint 2026 in NIST University, BAM in 2026
